

IDEAL NET PROTECTION

Three decisive measures

The new badge generation: WIESEL-FLAT-PLAKETTE

- ✓ Flat-lying and stress-free net installation.
- ✓ No dangerous bending of net threads at the edge of the badge.
- ✓ Temperature optimisation in the clamping area by means of a specific reflector-white!

maximum UV-stabilisation

2 years field test with UV-breaking test carried out simultaneously

WIESEL-NET COMB

- ✓ Open, not clamping net fixation.
- ✓ Thus, a thread fatigue (breakage) due to wind movement is prevented highly effectively.
- ✓ No net thread overheating due to back-ventilated, not clamping net fixation.

Black - long-term statistics

WIESEL-NET FINISH on the front cord

- ✓ The nets are not stressed via a top wire anymore and are stretched in an angled way in direction of the anchor.
- ✓ The nets are connected or screwed to the front cord in a gentle but powerful way.

WIESEL-AIM: Extending the hailnet durability by many years!
