

WIESEL-POLE EXTENSION

Mounted quickly and easily

POLE EXTENSION for concrete and wood poles

Effective extension of existing concrete- or wood poles in the plant, by means of mounting the attachable pole extension made of metal. In this respect, an extension of 50 cm or 80 cm can be carried out according to the requirements.

Advantages:

- ✓ The installation is manual and can be carried out in a very short time span. No heavy machines like earthmovers etc. are needed, which is an additional benefit for the ground and the crops.
- ✓ The robust construction of the pole extension offers a high stability, at the same time the installation in the plant is extremely net protecting.
- ✓ Besides the high profitability, also the extremely high pole trigger resistance is a convincing argument for the use of pole extensions on wood- or concrete poles.
