

SYSTEM-REVOLUTION-VIBRO

THE POWERFLEX Net

- Exceptionally emptying through „Powerflex“ vibration
- Optimized protection against scatter damage by a centered „funnel- emptying“
- Maximum protection of the net by the flat “bungy plakette position”
- Low weight load due to optimal hail emptying
- **Double lifetime of the net is realistic**
- By row direction crossways to slope if more than 5% we recommend our flat-plakette system with integrated curtain

*Ideal solution also by
net changing*
